

When Do You Typically Replace Your Batteries?

When they stop working! And by that time, you've already encountered expensive downtime, workflow disruption, and general aggravation. Zebra's new Battery Refresh Program takes away the headaches involved in tracking, testing and replacing your batteries for Zebra mobile printers.

Zebra® Battery Refresh Program

Improve uptime and optimize performance of your mobile printing system

Why Is It Important to Replace Your Batteries?

All batteries have a limited life and need to be replaced on a regular basis. After a lithium ion battery has exceeded its useful life, it will not retain the same performance characteristics and safety margins. Whether you're a typical user or a power user, Zebra recommends you replace your lithium ion batteries at least once a year.

What Is The Program and Why Should I Be Interested?

The Battery Refresh Program is a new service designed to automatically send out NEW Zebra lithium ion batteries on an annual basis. When you purchase a contract, simply select the battery type and provide the shipping address—Zebra will do the rest! After you receive your new batteries, place the old batteries into the box, apply the return address label, and send them back to Zebra for disposal and recycling. This program eliminates the need to keep track of the last time you replaced your batteries. Zebra does it for you—automatically!

Program Features

- Automatic annual replacement of batteries
- Battery warranty extended to one full year
- Up to 15% cost savings on battery expense
- Environmentally safe disposal and recycling of used batteries

Customized Contract Available

If you are power user of mobile printers, you may need to replace your batteries more frequently. Zebra can customize this program to meet your specific requirement.
